

## The Alexanders Lighting System™

### What?

is the Alexanders  
Lighting System

The Alexanders Lighting System is our VCA Approved layout for the lights all around your horsebox. It is designed to offer the very best in vision, safety and also styling, making sure you can see and be seen. We use the latest most efficient LED lights for ultimate intensity and reliability while, with a nod to fashion, these all clear filter lights will also look great with any paint scheme.

### Why?

is it so important to  
passengers and horses

Transporting horses often means manoeuvring in and out of tight gateways in yards or showgrounds, and quite often in the hours of darkness. We have ensured that you have enough well positioned lights to see all around your vehicle to help avoid damaging scrapes or collisions. Equally you may be moving slower than people expect and we want everybody else to see you in good time, helping avoid any sudden emergency manoeuvres!

### Where?

is the Lighting  
System located

The Alexanders Lighting System is strategically placed around your horsebox body for maximum vision and visibility, including:

- 3 High power LED reverse lights
- 2 High level LED indicator lights
- 2 Low level LED indicator lights
- 2 Low level LED brake lights
- 1 High level LED brake light
- 2 Low level LED rear night lights
- 1 Low level LED number plate light
- 2 High level LED marker lights
- 2 Low level red reflectors
